

Project Initialization and Planning Phase

Date	15/07/2026
Team ID	SWTID-2026-3095
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements :

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An individual applying for a credit card.	Get my credit card application approved quickly and fairly.	The approval decision depends on manual review of multiple financial and credit history factors.	Banks must verify income, employment type and duration, existing credit obligations, and past payment history to minimize default risk.	Anxious and uncertain about whether the application will be approved, and frustrated by the wait.
PS-2	A bank credit analyst reviewing incoming applications.	Quickly identify which applications are low-risk versus high-risk so I can prioritize my review time.	Each application must be manually cross-checked against income, employment, and credit history records.	The volume of daily applications makes manual, criteria-by-criteria review slow and prone to inconsistent judgment.	Overwhelmed by application volume and concerned about inconsistent, error-prone manual decisions.
