Empathy Map

This empathy map represents the perspective of a customer applying for a credit card. It helps understand the applicant's needs, concerns, actions, and emotions so that the machine learning system can provide faster and fairer approval decisions.

SAYS ● I need this credit card approved to manage my day-to-day expenses. ● The application process feels confusing and drawn out. ● I want a clear, transparent explanation of the decision criteria. ● How long is this evaluation actually going to take?	THINKS ● Will my income level be considered sufficient? ● Does my employment type or duration count against me? ● Is my credit history strong enough to qualify? ● What if there's a mistake somewhere in my submitted details?
DOES ● Fills out the online application (income, employment type, education, housing, family details). ● Double-checks entries before submitting to avoid errors. ● Checks application status repeatedly after submitting. ● Reaches out to customer support if the wait feels too long.	FEELS ● Anxious while waiting for a decision. ● Frustrated by the lack of transparency in approval criteria. ● Relieved and satisfied when approved quickly. ● Discouraged when rejected without a clear explanation.
