

Project Executable Files

Date	15/07/2026
Team ID	SWTID-2026-3095
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A — no database; flat-file model artifacts only
5	Environment configuration file (.env.example or similar)	N/A — no secrets/API keys required to run locally
6	Deployed application URL (if hosted)	No — currently run locally; see Scalability & Future Plan (Folder 8)
7	APK / Executable binary (if applicable)	N/A — web application, not a mobile/desktop app
8	Dockerfile / Containerization config (if applicable)	No — documented as a future roadmap item
9	Test files and test results	Yes — see Folder 6: Performance Testing
10	Demo video or walkthrough (if required)	Pending — see Project Demo Planning (Folder 8)

Step 2: File / Folder Structure

```
credit-card-approval-prediction/  
README.md  
requirements.txt  
train.py                (retraining pipeline → model/ artifacts)  
credit-card-approval-prediction.ipynb (original EDA & 4-model comparison)  
data/  
    application_record.csv  
    credit_record.csv  
model/  
    best_model.pkl  
    model_columns.pkl  
    categorical_value_map.pkl  
    decision_threshold.pkl  
    metrics.json  
docs/  
    er_diagram.svg  
app/  
    app.py              (Flask routes, ML scoring, SHAP explanation)  
    rules.py            (hard eligibility gate)  
    static/style.css  
    templates/ base.html, home.html, predict.html, result.html
```

Step 3: Run Instructions

- 1 Clone the repository: `git clone https://github.com/VakaVenkatesh/credit-card-approval-prediction`
- 2 Install dependencies: `pip install -r requirements.txt`
- 3 Place `application_record.csv` and `credit_record.csv` inside the `data/` folder.
- 4 (Optional — artifacts are already included) Retrain: `python train.py`
- 5 Run the app: `cd app && python app.py`
- 6 Open `http://127.0.0.1:5000` in a browser and go to "New Application".

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

[Paste or describe your folder structure here. Example:]

```

/project-root
/src    - Source code files
/tests  - Test files
/docs   - Documentation
/config - Configuration files
README.md - Setup and run instructions
requirements.txt - Python dependencies (or package.json for Node)

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	[e.g., Render, Vercel, AWS, Heroku, Azure]
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

[List required software, versions, and system requirements]

Step 1: [e.g., Clone the repository: `git clone <url>`]

Step 2: [e.g., Install dependencies: `pip install -r requirements.txt`] Step

3: [e.g., Configure environment: copy `.env.example` to `.env`] Step 4:

[e.g., Run database migrations: `python manage.py migrate`] Step 5:

[e.g., Start the application: `python manage.py runserver`] Step 6:

[e.g., Open browser at `http://localhost:8000`]

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1		
2		
3
